- a safe choice!

**NEW!**

## **COBS C-3105 – durable communication**

### **Robust and drop tested**

The C-3105 was developed in Sweden especially to withstand tough environments. This handset has an extremely robust, durable design with a rubberised exterior for optimal grip, water and dust resistance in compliance with the IP65 classification.

### **Wireless communication**

C-3105 is especially made to suit people with active, busy and flexible occupations. In hospitality, retail, healthcare and many other industries, several users want to communicate with each other and receive alarms and messages from their systems directly to their handsets.

### **Bluetooth as hardwired option**

If you need to use both hands while working and want to communicate with your colleagues at the same time, the C-3105 has both a headset jack and an integral bluetooth option.

For people working in noisy environments or for those who wish to use their handset in quiet mode, the C-3105 has built-in vibration.

### **Integration**

Handsets can be integrated with other systems such as fire, building and machine alarms. Multifunctionality leads to better efficiency and more flexible staff – you'll save both time and money.

### **Easy to use**

The C-3105 is easy to use thanks to its large colour display and easily accessible buttons. Alarms and messages are displayed with graphics, providing a clear and quickly understood screen view.

### **Function key**

On the right side of the C-3105 is an extra function key that can be used to dial a preprogrammed number. The key is easy to access even when wearing gloves or if you cannot use the keypad for any other reason.

2,5mm headset jack
