**- best in class!**

**NEW!**

## **COBS C-3110 - For complete control**

### **Easy to use**

The C-3110 has easily accessible buttons and a large colour screen that displays a status list showing the latest alarms. Alarms and messages can be prioritized and sorted by colour, with the most urgent alarms at the top, presenting a clear, quickly assimilated and easy screen view.

### **Communication**

To communicate with a colleague, call for help or to contact anyone - in any situation - is communication at its best. The COBS C-3110 lets your staff communicate with each other the simplest, easiest way.

### **Extremely robust and the assurance of a 3 year warranty**

The C-3110 is developed in Sweden and has an obvious Scandinavian attention to design. A rubberized casing affords optimal grip and increased protection.

This new handset is one of very few that offers the assurance of a full 3 year warranty. This is because it is drop tested, water and dust resistant in compliance with the IP65 classification. It is also easy to clean and resistant to commonly used disinfection chemicals.

### **System integration**

The C-3110 can be integrated with more advanced systems such as Unison, Integral and Inegra. This means that panic alarms, staff alarms or, for example, camera control can be activated directly from the handset. Fire alarm or other information is clearly displayed with graphics and colour-code.

### **Alarm button for safer, more confident staff**

The C-3110 has a large and easily accessible alarm button that makes it possible for staff easily and quickly to call for help. On the right side of the handset, an extra function key can be used to acknowledge an alarm or to send a pre-set 'soft' alarm.

### **Increased security with precise positioning**

C-3110 can be supplied with precise positioning. Knowing the location of staff increases the security and safety of staff working alone, late or overnight.
